

# Kovanica – Whitepaper (v1.1) – English

## 1. Introduction

Kovanica is a community-driven project created to harness the advantages of XRPL technology and blend them with creativity, humor, and utility. Our main token, **KUNA**, merges the spirit of meme culture with features the community can develop and use — from NFT collections to reward systems.

Our mission is to build a decentralized, open, and friendly ecosystem where anyone can participate without unnecessary barriers or complicated rules. The project is based on transparency, collective decision-making, and long-term value creation through community engagement.

---

## 2. Why XRPL?

**XRPL Ledger** offers the perfect foundation for our vision:

**Fast and low-cost transactions** – 3–5 seconds on average, with negligible fees.

**Stable and proven network** – over a decade of uninterrupted operation.

**Eco-friendly** – extremely low energy consumption.

**Flexibility** – easy to integrate features like NFTs and DeFi applications.

---

## 3. Our Approach

**Community First** – major decisions made via DAO voting.

**Meme + Utility** – combining fun with practical tools (staking, NFT marketplace, reward games).

**Security & Transparency** – all key data and plans publicly available, including locked liquidity and published `xrp-ledger.toml` file.

---

## 4. Roadmap (Summary)

**Phase 1** – Presale, brand creation, community building.

**Phase 2** – Liquidity lock, launch of NFT collections, staking and reward systems.

**Phase 3** – Partnerships, integrations, and ecosystem expansion through collaborations.

---

## 5. Disclaimer

KUNA is a community-driven meme project with no guarantee of value or return on investment. Participation in buying, trading, or using the token is entirely at your own risk. Always **Do Your Own Research (DYOR)** before making any decision.
