

KUNA Tokenomics

KUNA by Project Kovanica

Blockchain: XRP Ledger

Total supply: 1,000,000,000 KUNA (fixed, no additional minting)

1. Introduction

\$KUNA is not a currency, nor an investment, and Kovanica is definitely not your financial advisor — unless it's advising you to take a walk or enjoy some *cévapi* in bread.

"This is a tribute to the time when 10 kuna could get you food, drinks, and laughter — without needing a bank's permission."

Neither \$KUNA nor Kovanica are connected to the Croatian National Bank, the Republic of Croatia, the EU, or common sense.

If you buy, sell, or hold a few \$KUNA, know this: you're doing it because you *feel*/like it. And feelings can't be taxed.

\$KUNA is not a currency, but at least it's not fake stability with bad design. Everything else is... inflation.

2. Token Distribution

Category	Percentage	Amount (KUNA)	Vesting
Presale	30%	300,000,000	20% immediately, remainder linearly vested over 12 months
Liquidity Pool (LP)	15%	150,000,000	Locked for at least 12 months for investor protection
Marketing & Growth	10%	100,000,000	Used specifically for promotion and partnership campaigns
Rewards & NFT Ecosystem	15%	150,000,000	For staking rewards, NFT drops, and activities
Team & Collaborators	10%	100,000,000	Locked for 12 months, then unlocked via DAO voting
Treasury & Development Fund	10%	100,000,000	For long-term development, integrations, and partnerships
Burn Reserve (Immediate)	5%	50,000,000	Burned immediately after presale ends
Burn Reserve (5 months after Presale)	5%	50,000,000	Burned 5 months after presale ends

3. Growth & Stability Mechanisms

- **Deflationary model:** Fixed supply with planned token burns to reduce circulation and potentially increase the value of remaining tokens.
 - **Secured liquidity:** Initial LP locked for at least 12 months to prevent “rug pull” scenarios.
 - **Community governance:** Key decisions, including additional burns and unlocks, made by a DAO community via voting.
 - **Meme + Utility approach:** While KUNA is primarily a meme coin, it includes functionalities such as staking, NFT marketplace, and gamified rewards.
-

4. Burn Plan

- **Phase 1:** 50,000,000 KUNA burned immediately after presale ends.
 - **Phase 2:** 50,000,000 KUNA burned 5 months after presale ends.
 - **Possible additional phases:** DAO community can approve further burns to enhance deflation.
-

5. Disclaimer

KUNA is a meme coin and carries no guarantee of value, return on investment, or future utility. This project is primarily community-driven and intended for entertainment purposes. Participation in buying, trading, or using KUNA tokens is entirely at your own risk.

The Kovanica team takes no responsibility for financial losses, price volatility, or technical issues related to the blockchain or third parties.

KUNA is not and does not represent a security, investment product, or issuer obligation. Before making any purchase or investment, it is recommended to **Do Your Own Research (DYOR)**.
